WOOD & UPHOLSTERED  
**CORFU**

**krug**

From world-renowned seating designer Jorge Pensi comes Corfu - a groundbreaking fusion of curvaceous forms that will elevate the appeal of any space - indoors, or outside. Whether the venue is for work or play, healing or learning, eating or drinking - Corfu is stackable, durable, and eminently lovable.

Corfu's sinuous metal frame is made with high-strength aluminum castings and extrusions, and is available in three finishes: Silver Metallic, Black Metallic and Polished Aluminum. Arm options include plastic (polypropylene) in six standard colors, as well as Silver Metallic, Black Metallic and Polished Aluminum. Any of these arm styles can be combined with either frame finish.

Corfu

European Beech hardwood veneers, with nine plys of cross grain layering for superior strength, and finished with Krug's anti-microbial Enduraguard - the toughest wood finish in the business.

Corfu features two options for upholstery: upholstered pads on plastic seats and backs, or fully upholstered seats and backs.

Corfu is designed to support sustainability: it is made using recycled materials, with an overall recycled content of 60% - and its packaging is also made from recycled materials. Corfu's component materials are also recyclable at the end of product life, with an overall recycled content of 85%. Corfu is certified under the GREENGUARD™ emissions standard.

Wood components are finished with Krug's Enduraguard™ finish system - a finish that complies with GREENGUARD™ emissions standards, and yet provides the most durable coating available for wood. It features an anti-microbial compound, to support infection control, and it has been tested to resist heavy-duty cleaning solutions used in healthcare and institutional environments.

Corfu is designed for high-traffic, high-use environments. The frame is made from aluminum, which gives it superior strength properties, and also supports cleaner, infection-free environments because it will not corrode. A molded cover closes off the underside of the chair, promoting cleanability and infection control, while also helping to prevent damage when it is stacked and stored.

Seats, backs and arms are field-replaceable if damaged, extending the life of the product.
