## Cleaning & Maintenance Veneers

### Wood

Dust with a clean, dry cloth, going with the grain. Clean any marks with a damp cloth, using a small quantity of mild soap or detergent. Do not use any wax-based polish, spray or silicone. Eventually, a film will build up and discolor the top. Do not place furniture in a position of permanent exposure to direct sunlight.

## Cleaning & Maintenance Solid Surface

### Corian

Clean with a microfiber cloth. Standard household kitchen sprays should remove most stains. For most residues, clean with warm soapy water, an ammonia-based household cleaner, or a dedicated countertop cleaner. Avoid window cleaners as they leave a build-up that dulls the surface. Film will build up on countertops if water is left to dry on the surface. This film will dull the countertop surface, making the finish appear blotchy and uneven. To prevent film build-up, it is very important to wipe the countertop completely dry immediately after spills and cleaning.
